

A Two-Stage Method for Commodity Price Trend Forecasting

SIGIR Workshop: FinIR
30th July 2020

ustc_youdu: Bingjie Liang, Huixin Liu and Chujing He
University of Science and Technology of China

• Problem Description

The main task is to build prediction models and use data from 2003 to 2018 to predict the six metals' price movement direction in 2019 at three time-horizons.

- Task 1: 1-day
- Task 2: 20-day
- Task 3: 60-day

- Data Description
 - Time series data
 - Daily transaction data in LME for six metals
 - Daily transaction data of main relevant commodities and financial indices
 - Textual data
 - Analyst Reports published by institutional trader and News Reports, collected from both English and Chinese sources.

• Data Preprocessing

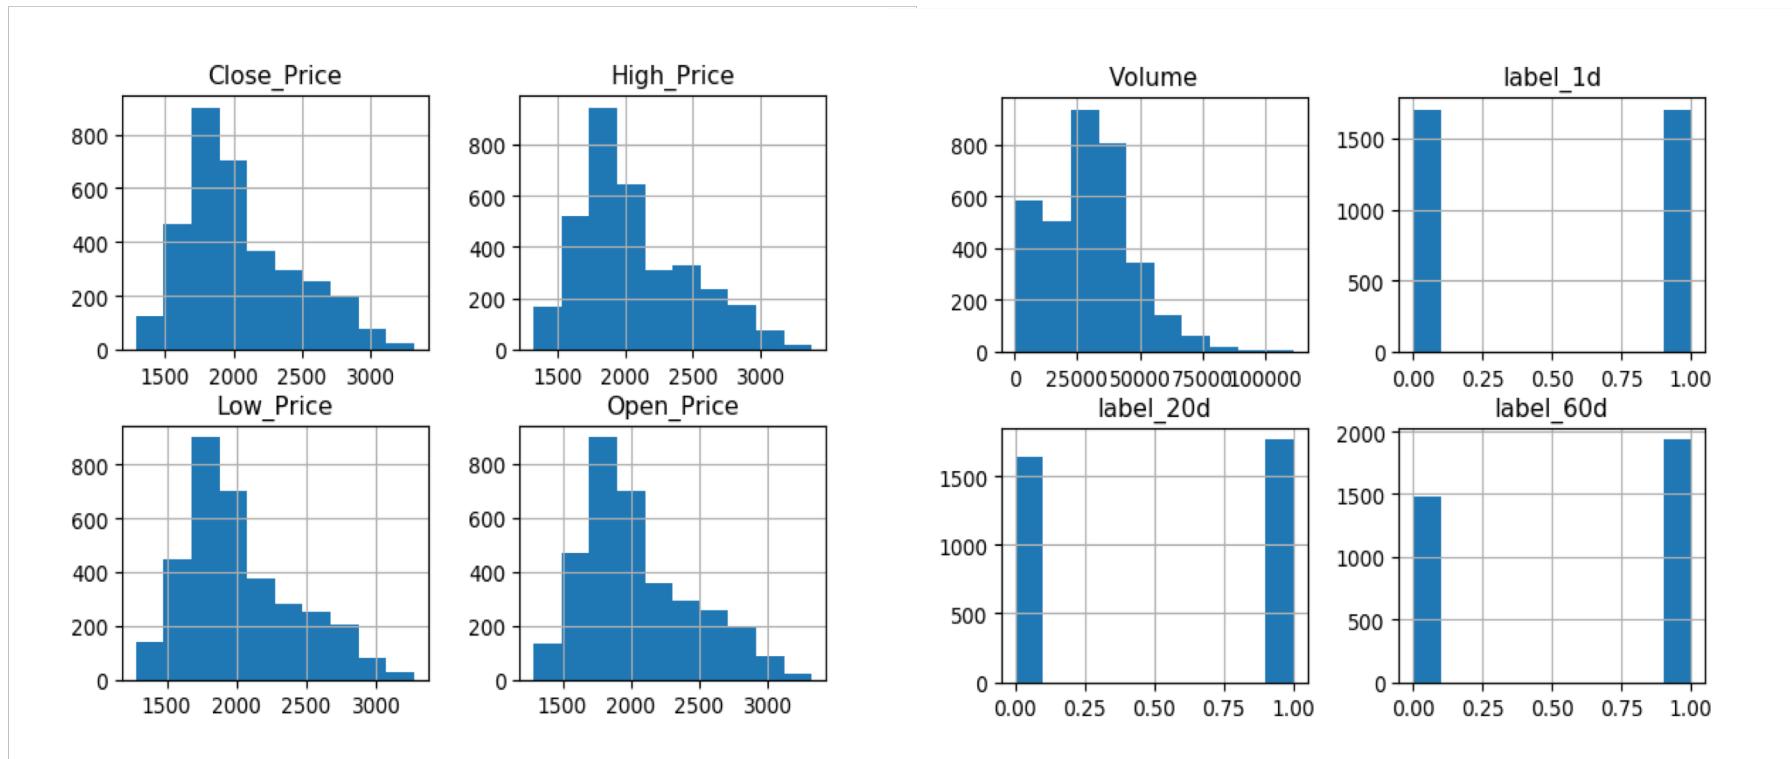

- Integrate 17 variables corresponding to each metal
- Fill in missing values with previous data
- The features are as follows

| Variable | Meaning | Example |
|-------------|------------------------------|------------|
| Time | Date | 2003/12/11 |
| Open_Price | Opening price | 1550.0 |
| High_Price | Highest price | 1550.0 |
| Low_Price | Lowest price | 1535.0 |
| Close_Price | Closing price | 1547.0 |
| Volume | Trading volume | 563.0 |
| OI | Open interest | 559 |
| DXY | DXY index | 88.88 |
| NKY | NKY index | 10075.14 |
| SHSZ300 | SHSZ300 index | 1184.63 |
| UKX | UKX index | 4335.4 |
| VIX | VIX index | 17.87 |
| SPX | SPX index | 1059.05 |
| SX5E | SX5E index | 2660.73 |
| Label_1d | Price trend label for 1 day | 0/1 |
| Label_20d | Price trend label for 20 day | 0/1 |
| Label_60d | Price trend label for 60 day | 0/1 |

- Feature Selection
 - Take Aluminum for example

• Feature Selection

- Use different feature combinations to train traditional classification models
 - Naïve Bayes、KNN、Random Forest、SVM
- Input of classification model
 - Feature values of the current trading day and the expected trading day

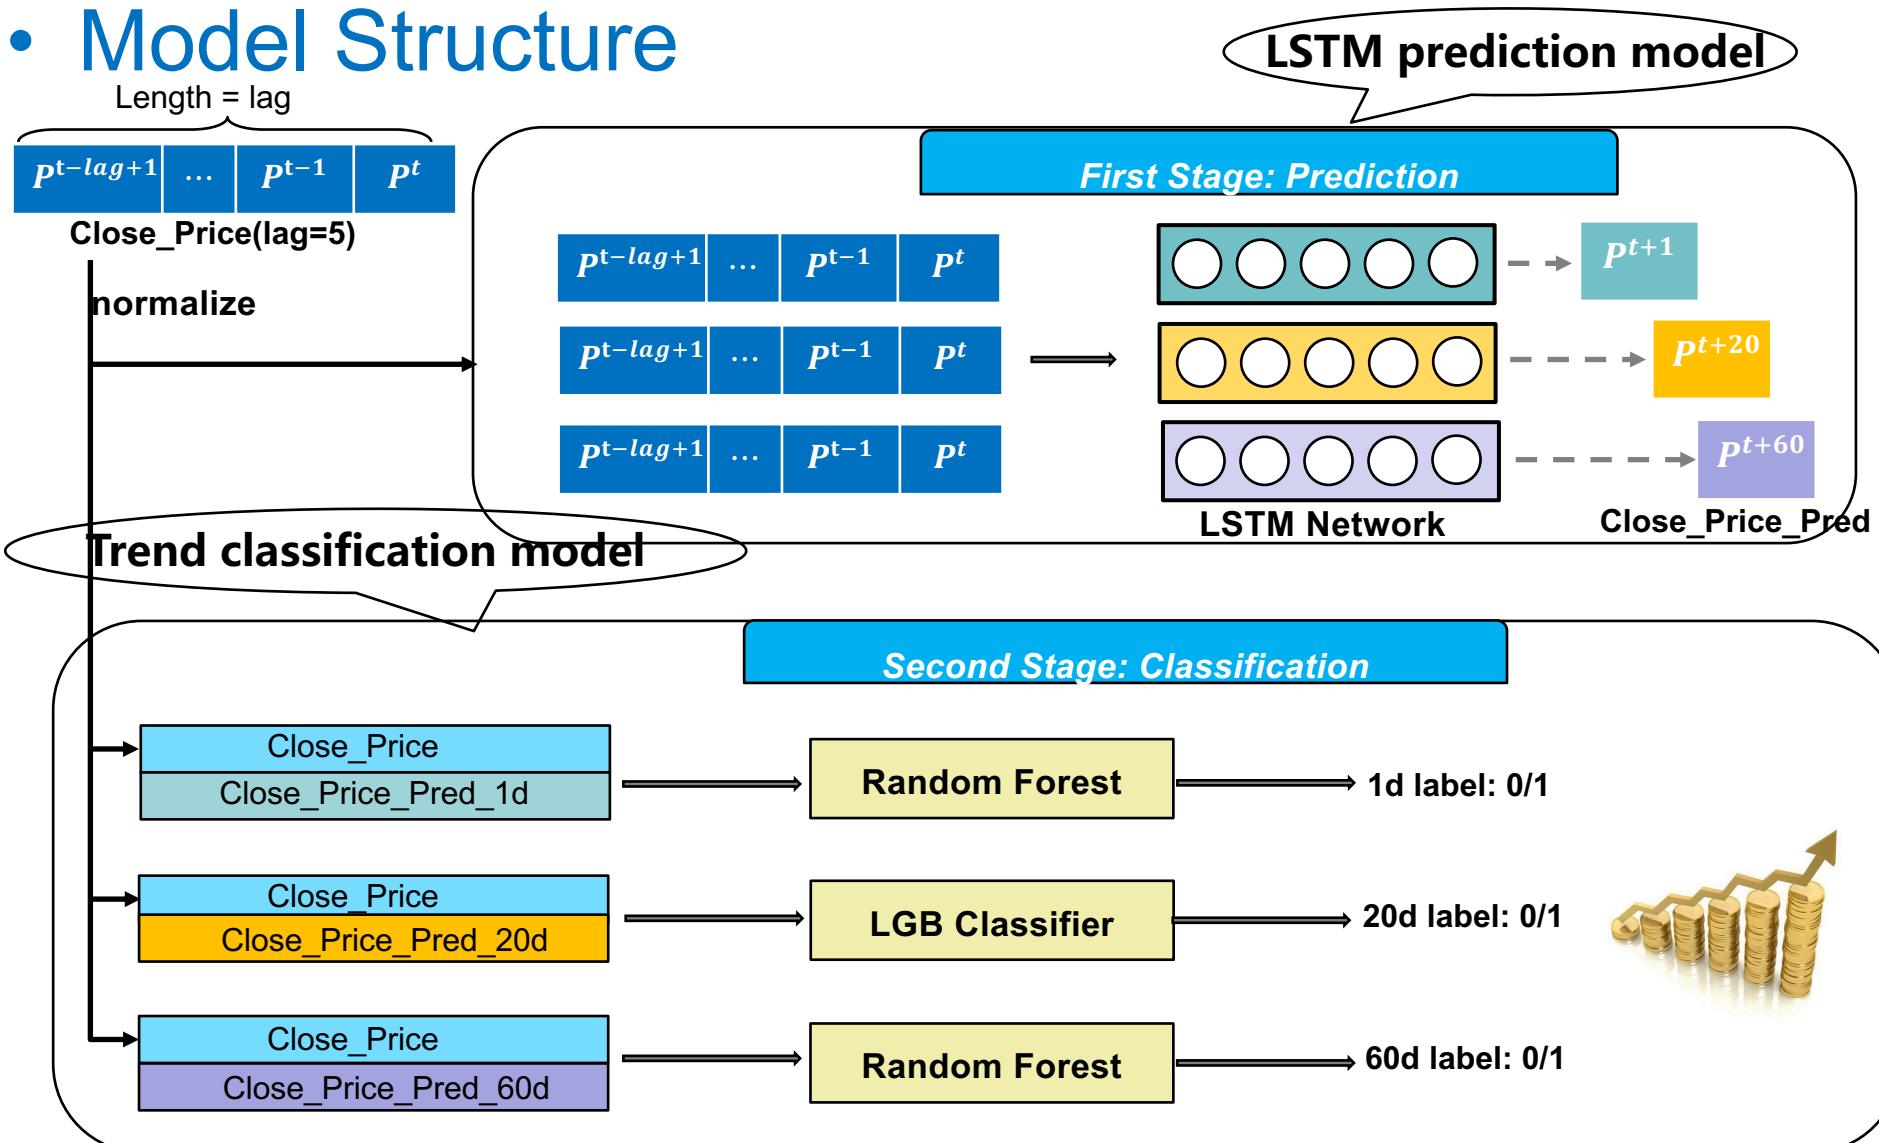

• Important features

- Open_Price、High_Price、Low_Price、Close_Price

• Model Structure

• Prediction Curve

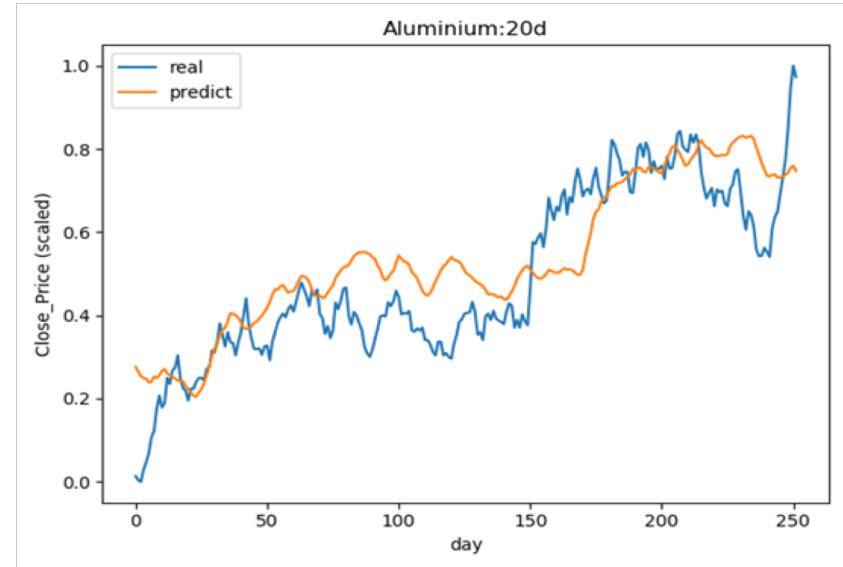

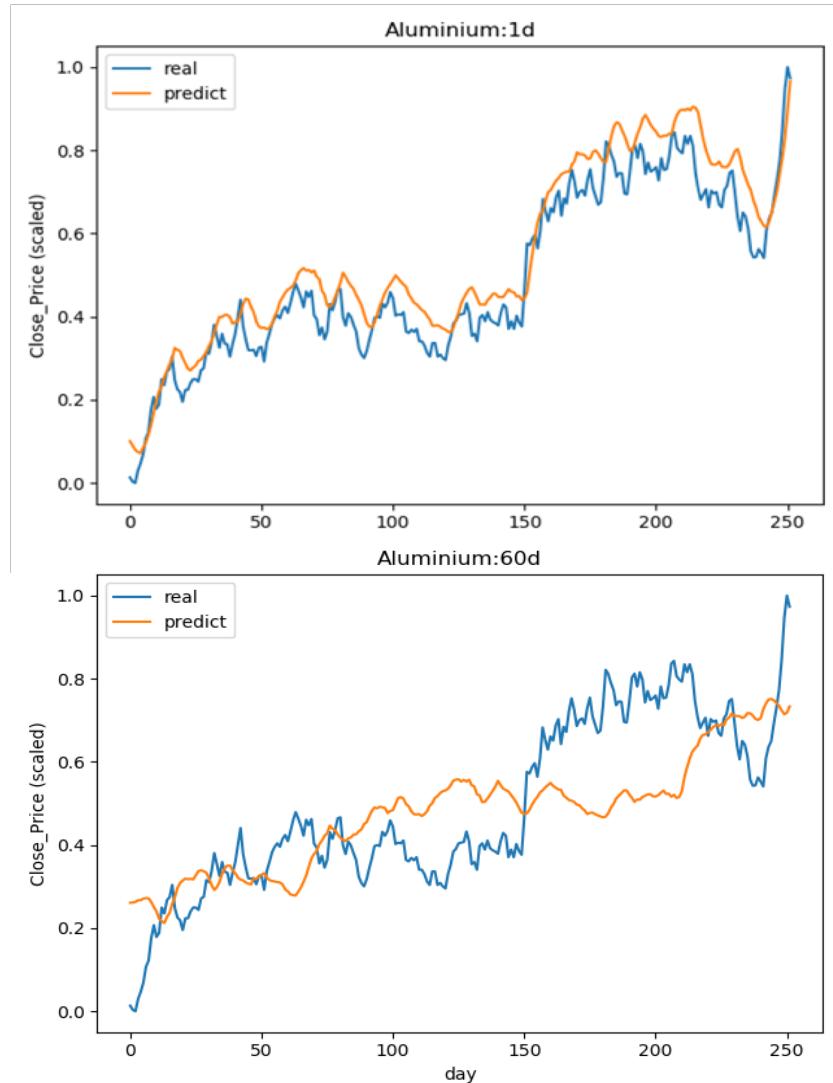

Figure: Prediction curves for Aluminum on validation set

- Results

| Total | Task1(1d) | Task2(20d) | Task3(60d) |
|-------------|-------------|-------------|-------------|
| 55.18225736 | 50.00000000 | 48.74835310 | 66.79841897 |
